

## DME different from Pick list

This procedure should be utilized when a DME item different from the DME item described on the daily CURRENT worksheet is issued to a client.

An example:

A Tall 4-wheel rollator is issued to a client, because the Standard 4-wheel rollator originally requested is too short for the client.

The "CURRENT worksheet" entry for this client needs to be updated to reflect this change. Otherwise the bar code that appears on the client's Agreement Form will NOT correspond to the correct DME description.

*Len suggests using a modification of the procedure that is used for items that have been "Office Issued"*
